1954 Proposal

1954 Plan

Pig iron

Item

1,250,000

1,630,000

1,475,000

1,850,000

Objection: The amount proposed is fully in accordance with the pig iron balance agreed upon during the Moscow discussions. This increase would necessitate the construction of a third blast furnace at the Eisenhüttenkombinat Ost (EKO) in 1952, the finishing of the sixth blast furnace at EKO by spring 1953, and probably the building of one or two additional furnaces at EKO.

Iron ore

1,580,000

2,330,000

2,270,000

2,600,000

Objection: This amount of iron cannot be processed with present and planned blast furnaces; therefore, it is unnecessary to mine the additional amount.
